

# Post-concussive Symptoms and Executive Functioning Study

**Have you had a concussion or moderate traumatic brain injury and now experience cognitive and/or psychological symptoms?**

**Purpose:** To examine the association of self-reported executive functioning with psychological symptoms and test-based executive functioning.

**Eligible participants must:**

- Be over 18
- Have had a concussion (mild traumatic brain injury) or moderate traumatic brain injury more than 3 months ago
- Have cognitive or psychological symptoms

**Procedures:**

- Cognitive and psychological testing
- Passive data collection on your smartphone if you have an Android (optional)

**Study Visits:** The study will last 8 weeks and include 3 visits total.

- Baseline (3 to 4 hours)
- Follow-up (4 weeks after baseline, 3 hours)
- Final (4 weeks after follow-up, 3 hours)

**Compensation:**

- You may be compensated for your participation only if you are a non-federal employee/non-active duty

**For more information, please contact us at 301-941-7985 or [psefstudy@usuhs.edu](mailto:psefstudy@usuhs.edu) to see if you may qualify.**
