

Volunteers with history of traumatic brain injury and posttraumatic stress symptoms needed

Researchers at NICoE are offering the opportunity to participate in a research study evaluating the impact of art therapy on brain activity using EEG

Eligibility

- Active duty service member or recently separated veteran aged 18-64
- History of mild traumatic brain injury
- Current posttraumatic stress symptoms
- No previous art therapy exposure

What Will I Need to Do? Your participation will include a single four hour visit that will consist of completing a series of questionnaires and interviews along with a two hour art therapy session while wearing an EEG device

Where Will the Study Take Place? National Intrepid Center of Excellence (NICoE), Walter Reed National Military Medical Center, (WRNMMC) Bethesda Maryland
